

Six NDIS Funding Checks Worth Running Every Month

Practical checks a support coordinator can run on any caseload, drawn from building and refining the NDIS Funding and Burn Rate Tracker on a real caseload.

Most funding problems are not discovered at plan review. They build quietly over weeks, through small habits that let spend drift away from the plan timeline. These six checks are the ones worth running on a fixed schedule, not just when something already feels wrong.

1 Compare total committed spend to remaining budget, not spent to date alone

Spent to date only shows what has already gone out. Add what the current roster will cost between now and plan end, rate multiplied by sessions remaining, and compare that combined total against remaining budget. A shortfall becomes visible while there is still time to adjust the roster or request a plan variation, rather than being discovered at plan review.

2 Separate periodic releases from the total budget

PACE plans release funding in periods rather than as one lump sum. Treating a period release as spendable against the full plan total risks overcommitting early and leaving nothing for the next release. Track each release separately, with its own rollover if unspent.

3 Set a tighter alert threshold for therapy than for core

Core overspend is usually recoverable within a few weeks. A therapy waitlist is not. Flag therapy categories once spend runs even ten percent ahead of plan timeline elapsed, rather than waiting for the wider margin that is reasonable for core supports.

4 Track stated supports separately from flexible funding

Stated supports cannot be pooled with other categories, even when the participant is self managed. A tracker or spreadsheet that lets stated and flexible funds blend together will quietly overstate what is actually available to spend.

5 Do not let provider travel disappear into the session rate

Travel cost per session adds up quickly for participants in regional or remote areas, and it is easy to lose inside a bundled provider rate. Keep it as its own visible figure so it shows up in reporting rather than being discovered at reconciliation.

6 Review against plan time elapsed, not the calendar month

The number that matters is percentage of plan spent against percentage of plan time elapsed, not whether it happens to be the start of a new month. A category can look calm on a monthly view and still be badly off track against the plan timeline.

Want these checks running automatically across your whole caseload?

The NDIS Funding and Burn Rate Tracker applies all six checks to every participant, forecasting total committed spend against remaining budget automatically, with PACE release tracking and NDIS Price Guide rate lookup built in. It runs entirely on your device. Nothing is ever transmitted anywhere.
