Health, NDIS and Allied Care

For practice owners, clinic managers, NDIS providers and aged care operators.

01

Which funding streams are actually profitable per clinician?

Across private, Medicare, NDIS, DVA and WorkCover, most providers cannot tell which stream genuinely makes money versus which looks busy but erodes margin.

02

How much clinician capacity is lost to cancellations and non-billable time?

The gap between rostered hours, delivered hours and billed hours is often the single biggest source of invisible profit loss in an allied health practice.

03

Which services are actually covering their cost of delivery?

OT, physio, support coordination and personal care each carry a different margin profile. Most operators have never seen it broken down at the service line level.

04

Which clients are showing early signs of disengagement?

Declining appointment frequency, increasing cancellations and reduced goal progress are measurable signals that appear weeks before a formal exit.

05

Are mandated care minutes being met, and where are shortfalls forming?

Under the AN-ACC funding model, care minutes shortfalls attract significant risk. Most providers find out after the fact rather than with enough time to correct.

Want to know the answer to one of these for your business?
